

SUBJECT INDEX TO VOLUME 2

Adhesions	20	IL-6 in	267
Adrenergic receptor	363	prostanoids in	266
expression of	363	treatment regimen against	261
signaling of	363	CbI	84
Aerolysin	17	regulation of molecules of	86
Aeromonas	13	T cell function of	84
associated septicemia	14	Cbl-b	84
clinical manifestations infections of	13	in anergy	84
host immune responses to	13	inactivation of PLC γ 1 by	86
other infections caused by species of	14	targets for anergy enforcement by	87
virulence factors of	13	CD28	74
wound infecting caused by species of	14	CD4 cell differentiation	159
Allergens	160	molecular/cellular basis for	159
Allergic disease	313	CD4 ⁺ TH1/TH2 cell cytokines	366
immune mechanisms of sublingual		regulation of	366
immunotherapy in	313	Ceramide-1-phosphate	107
mycobacterial adjuvants in	313	Chemokines	331
treatment of	313	expression during cerebral malaria	336
Allergy	157	expression during placental malaria	335
effect of hygiene	161	functions of	332
Apoptosis	105,119	in malaria infection	331
effect on <i>Bacillus anthracis</i>	127	parasite binding of	333
effect on <i>Clostridium</i> ssp.	129	production of by spleen	333
effect on <i>Listeria monocytogenes</i>	128	systemic production of	333
effect on <i>Staphylococcus aureus</i>	123	Chromatin remodeling	273
effect on <i>Streptococcus agalactiae</i>	125	Cloning	68
effect on <i>Streptococcus pneumoniae</i>	125	in generating autologous stem cells	68
effect on <i>Streptococcus pyogenes</i>	126	<i>Coxiella burnetii</i>	225
effect on <i>Streptococcus</i> spp.	125	cytokines and	230
extrinsic death receptor-mediated	121	cytoskeleton reorganization induced by	226
function of	120	entry into phagocytic cells	226
implications of bacteria-modulated by	130	in macrophages	225
intrinsic mitochondria-mediated	121	in Q fever immunopathology	225
PCD for immunity to infection	130	integrin-dependent phagocytosis of	226
regulatory molecules of gram-positive		intracellular life of	225
bacteria	123	intracellular trafficking of	228
SPHKs in regulation of	105	phagosome maturation of	230
steady-state machinery of	120	role of toll-like receptors in infection with	227
B cell immunity	364	virulence factors of	225
regulation of	364	CTLA-4	74
BOB. 1/OBF. 1	3	Cytolytic toxins	15
as regulator of B cell function	3	Cytotoxic enterotoxins	19
expression pattern of	4	DC-tumor fusion cells	298
genes differentially expressed in deficient		immunologic basis of	299
animals of	8	selection of	298
in deficient mice	6	DC-tumor fusion vaccine	291
in early/late phases of B cell development	6	as T-cell stimulators	295
regulation of expression of	4	electrofusion for	296
BTLA	74	PEG-mediated fusion for	296
Cancer	261	regimen for	299
gangliosides in	267		

use in antitumor immunity	291	molecular abnormalities of	173
virus-mediated fusion for	297	molecular advances of	169
Dendritic cells	261,305,351	mouse models for development of	170
from small intestine-associated lymphoid		patho-biological mechanism leading to	
organs	351	osteosclerosis in	175
in innate/adaptive immunity against tumor	261	patho-biological mechanism leading to	
in tumor immune evasion	263	development of abnormal stem/progenitor	
reversal of tumor induced paralysis of	261	cell trafficking in	177
E3 ligases	88	patho-biological mechanism leading	
in T-cell tolerance	88	leukemic phase in	181
Enolase	20	patho-biology of neoangiogenesis in	176
FCεRI-proximal signaling	357	Immunity	361
ligation in mast cells	358	brain association with	361
Fibrosis	174	Immunological barriers	65
patho-biological mechanism leading to		for replacing damaged organs	65
development of	174	Immunomodulatory biologics	187
Flagella	20	IL-2 receptor targeted	187
FTY720	104	Immunotherapy	37,291
in lymphocyte trafficking	104	of cancer based on DC-tumor fusion vaccine	291
Gene silencing	274	role of T cell costimulation	37
DNMT as model of	274	Inflammation	319
nuclear repositioning in	276	Inflammatory response	106
Gram-positive bacteria	119	SPHK1/SIP in	106
consequences for immunity	119	Innate immunity	319,364
mechanistic diversity of	119	regulation of	364
regulation of apoptosis by	119	Interleukin-2 (IL-2)	187
Heat shock proteins (HSP)	209	immunobiology of	187
active release hypothesis of	210	Interleukin-2 receptor (IL-2R)	187
mechanisms of release of	209,210	immunobiology of	187
Hepatitis C virus	305	in antibody-based targeted therapy	188
role of dendritic cells	305	in apoptosis inducing biologics	200
Hormones	247	in chimeric antibody fusion biologics	194
modulation of neutrophil function by	247	in chimeric IL-2 immunoglobulin biologics	196
Hsp72	209	in conjugated antibody biologics	191
antigen presentation of	211	in cytokine-based targeted biologics	186
biological significance of	212	in pro-apoptotic IL-2 fusion biologics	199
chaperone activity of	209,212	in unconjugated antibody biologics	188
initiation of immune response by	209	potential problems with targeted therapy by	200
receptor for	211	Lipases	19
signaling of	211	LPS/S-layer	19
5-HT-receptors	28	Macrophage migration inhibitory factor (MIF)	217
5-HT-transporter	28	as genetic basis of monocyte/macrophage	
Idiopathic myelofibrosis	169	responses	221
cure for	182	in human genetics	219
genetic abnormalities associated with	170	in innate immunity	218
		population studies of	220
		role in genetic basis of macrophage	
		responsiveness	217
		Major histocompatibility complex (MHC) class I	233
		based presentation of exogenous peptides	234
		Hsp70 mediated presentation of	241
		in dependent MHC class I ligands	237

- in tumor development237
- ligands from internal positions in proteins239
- presentation of endogenous peptides233
- role of peptide transport *via* TAP molecules233
- TAP-independent presentation of233
- Malaria 331,371
 - chemokines in331
 - clinical features of331
 - developing a blood stage malaria vaccine for371
 - effect of parasite-induced apoptosis373
 - immunological impediments for371
 - impediments to efficacious vaccines for372
 - murine models of331
 - natural immunity to371
- Maternal immunity373
 - alternative strategies to374
 - immune deviation as result of373
- Mucosal immunity157
 - modulation for treatment of respiratory
 - allergies163
 - role in prevention/pathogenesis of respiratory
 - allergic diseases157
- Neutrophils247
 - effect of angiotensin254
 - effect of anterior pituitary hormones250
 - effect of leptin254
 - effect of pituitary hormones250
 - effect of posterior pituitary hormones252
 - effect of reproductive hormones252
 - effect of salivary gland factors252
 - effect of thyroid hormones250
 - endocrine regulation of248
 - in superoxide production248
 - regulation of function of248
- NF- κ B357
 - activation by Fc ϵ RI-mediated signal
 - transduction357
 - effect of BCL10358
 - effect of MALT1358
 - in allergy357
 - in inflammation357
- Norepinephrine361
 - as neurotransmitter361
 - regulation of adaptive immunity by361
- Octamer-dependent transcription3
- Organ replacement67
 - applications of xenotransplantation for67
 - role of application of cell transplantation69
- Organ transplantation65
- Organogenesis68
 - for augmentation/replacement of organ
 - function69
- OX4037
 - as targets for immunotherapy of human
 - disease37
 - expression characteristics of38
 - function on T cells38
 - in graft-vs.-host disease43
 - in inflammatory bowel disease43
 - in rheumatoid arthritis43
 - in type 1 diabetes42
 - role in experimental autoimmune
 - encephalomyelitis41
 - role of T cell costimulation37
 - targeting axis in allergy/asthma44
 - targeting axis in cancer46
 - targeting in autoimmunity/transplantation39
 - targeting in viral infections45
 - viral hijacking of45
- Pentraxin 3 (PTX3)319
 - as maker in human pathology325
 - binding to C1q322
 - binding to micro-organisms322
 - functional roles of322
 - gene of319
 - in autoimmune disorders326
 - in female fertility319,324
 - in human fertility326
 - in infectious disorders325
 - in inflammation319,323
 - in innate immunity319
 - in recognition of apoptotic cell324
 - interaction with FGF2324
 - interaction with microbial moieties323
 - protein organization of319
 - regulation of319
 - role in angiogenesis324
 - role in complement activation322
- PILI20
- PKC ζ 150
 - functions in B cells151
 - functions in monocytes/macrophages151
 - functions in T cells151
- PKC θ 151
 - functions in T cells151
- PKC isotypes143
 - in T lymphocytes143
 - physiological/non-redundant function of143
- PKC kinases143
 - as gene family of nine isotypes143
 - in T lymphocyte physiology146
 - regulation activity in T cells145
- PKC α 146
 - functions in macrophages/mast cells147
 - functions in T cells147
- PKC β 147
 - functions in B cells147
 - functions in mast cells148
 - functions in T cells148

PKC δ	149	Sphingosine-1-phosphate (SIP)	102
functions in B cells	149	formation of	107
functions in monocytes/mast cells	149	function as receptor ligand	104
functions in T cells	149	intracellular functions of	105
PKC ϵ	149	physiological functions of	108
functions in macrophages	150	production by SPHKs	102
functions in T cell	149	secretion of	104
Programmed death 1 (PD-1).....	74	Statins	55
Proteases	19	for neurodegenerative diseases in	
		neuroinflammation	61
		for treatment/management of immune-mediated	
		disease	59
Quorum sensing	21	in cell recruitment	57
		in immune activation	55
		in JAK/STAT signaling	60
		in lipid raft disruption	60
		in regulation of MHC2TA transcription	59
		isoprenylation by	61
		LFA-1interaction by	61
		molecular mechanisms of immune regulation	
		by	59
		NF- κ B activation by	61
		putative immune regulatory role of	55
		T/NK cell function of	57
		Stem cells	67
		for augmentation/replacement of organ	
		function	67
		Sublingual immunotherapy	313
		antibody responses by	314
		hypotheses for mechanism of action of	313
		mechanisms of	313
		mycobacterial adjuvants for allergen based by	315
		oral-mucosal immune responses by	314
		T cell responses by	314
		Superantigen	80
		induced activation/energy	80
		T cells	273
		molecular events during differentiation/	
		activation of	273
		structural changes in chromatin during	
		activation of	278
		$\alpha 4\beta 7^+$ T cells	353
		in acute graft-versus-versus-host disease	
		(GVHD)	353
		in type I diabetes	353
		inflammatory bowel diseases	353
		T-cell anergy	73
		biochemical features of	81
		biochemical mechanisms of	73
		downstream signals generated independently	
		of costimulation of	76
		effect of Cbl-b	84
		effect of cell cycle blockade	82
		effect of cyclic AMP	83
		effect of mTOR inhibition	82
		effect of Rap1	83
		effect of Tob	83
PKC δ	149		
functions in B cells	149		
functions in monocytes/mast cells	149		
functions in T cells	149		
PKC ϵ	149		
functions in macrophages	150		
functions in T cell	149		
Programmed death 1 (PD-1).....	74		
Proteases	19		
Quorum sensing	21		
Reactive oxygen species (ROS)	247		
Reservoirs	14		
Respiratory allergies	157		
by air pollution	160		
development of	157		
role of airway immunity	157		
tolerance in	157		
Retinoic acids	349		
biosynthesis by DCs	352		
effect on skin-homing receptors	349		
expression of gut-homing receptors by	349		
imprinting of gut-homing specificity by	351		
in immunological disease	353		
involvement of RAR in	350		
production by dendritic cells	351		
regulation of homing receptor expression by	349		
regulation of homing specificity by	352		
Self-specific T-cells	80		
adoptive transfer of	80		
Serotonin	27		
as modulator of immune function	27		
availability for immune cells	27		
cellular/functional effects of	30		
components in immune cells	28		
in cytokine release	30		
in lymphocyte proliferation	31		
intracellular signaling pathways of	31		
molecular actions of	31		
Siderophores	20		
Signal transduction	75		
in T-cell activation/IL-2 production	75		
Sphingolipids	101		
as intracellular mediators	101		
as ligands for cell surface receptors	101		
as raft constituents	101		
as second messengers	101		
function as receptor ligands	101		
in cell signaling	101		
intermolecular forces in signaling of	109		
physico-chemical basics of	109		

essential mediator of	82	Tumor	264
experimental models of	79	gangliosides in	267
pharmacological manipulation of	80	IL-6 in	267
role of altered TCR engagement	79	induced dendritic cell paralysis	264,267
T-cell signaling in	78	prostanoids in	266
TCR engagement	79	Tumor cells	294
in absence of costimulation	79	for prophylactic use	294
TCR-proximal signaling events	75	Type III secretion system	21
TH1/TH2 paradigm	281	Vitamin A	345
T cell memory in	284	in T cell homing to gut	345
Thymus	274	roles of	345
chromatin remodeling during T cell		intake of	346
differentiation in	274	metabolism of	346
Tissue engineering	68	deficiency of	346
Transporter associated antigen processing (TAP)	233	in T cell migration	348
in disease	236	in immunological disease	353
in infectious agent vaccine design	241		
in virus infections	237		
independent pathways in cancer	241
